

POSITION TRANSMITTER 2 WIRE - NON-CONTACT- INDUCTIVE

MODEL: RMG-UPT-136H-21

DESCRIPTION

RMG-UPT-136H-21 is a 2 wire Position Transmitter, widely used to transmit the position of a Control Valve / Power Cylinder / Electric Actuator in a variety of process control applications. The Contactless Hall effect based Position Transmitter is a 24V DC operated 2Wire System, which accepts angular movements ranging from 0° to 15° to 0° to 90° and converts into 4.00 to 20.00mA signal when suitable back lever and linkages are used.

SALIENT FEATURES

- Non-contact, inductive Hall Effect type.
- User friendly, embedded design assisted calibration.
- Accepts a wide supply voltage range.
- Wide operating temperature range.
- Minimal effect of ambient temperature variance on accuracy.
- Encapsulated electronics - to protect from moisture, vibration and tampering of the circuitry.
- Compact and rugged as compared to other Position Transmitter available in the market.
- Linearity curve can be adjusted for a maximum of 15 positions in the operating range of the CV/PC.
- High accuracy with minimal Linearity and Hysteresis errors.
- Reverse Polarity protected.
- High Isolation and Dielectric strength.
- Suitable for use in very low stroke as well as high stroke applications.
